

Prof S. Watson.

Dear Sir!

With this I send some more representative specimens of the questionable Aster from Little Rock. Unfortunately I was not able to collect it with fully ripened achenes. Also a *Pyrenanthemum* from the same locality, is it *P. chinopodioides*? Likewise a *Vicia* from this place, growing on open grassy hills, together with *Vicia exigua* and very similar to this with the exception of the leaf

Very Respectfully
H. A. Hassel
